

## Welcome to 2022

*Welcome to the milestone year of APPU.*

*We are confident that APPU will be conducting the 13<sup>th</sup> APPU Congress, electing her next Secretary General and celebrating her 60<sup>th</sup> Anniversary in 2022.*

*APPU would like to thank the members and the partners for the opportunities and strong supports you have given to us in the past years.*

*We wish you a year full of blessings and happiness in the year 2022.*

## SingPost intends to replace its current vehicles with electric vehicles by 2026

Singapore Post (SingPost) has begun trialling fully electric three-wheeler scooters and vans with a view to replace its entire delivery fleet by 2026.

SingPost intends to progressively replace all 700 motorcycles and three-wheeler scooters, as well as 140 vans, with electric motor equivalents as their leases expire over the next five years. This would make SingPost the first postal service in the Asia-Pacific region to commit to a 100% electric delivery fleet.

## Swiss Post migrates its data to UPU cloud

Swiss Post is one of the operators to move its International Postal System (IPS) software to the Cloud services operated by the UPU's Postal Technology Center (PTC).

Swiss Post has used the international accounting component of UPU's IPS software for years, hosting and maintaining the software locally. It migrated to UPU's Cloud environment on 30 June 2021.

Swiss Post said the cloud version will simplify its processes. The UPU, which developed the software, will host it as well. This means the UPU will have access to the Swiss Post database. Any modifications that need to be done will be implemented immediately.

In addition to simplifying the software maintenance and support for posts, the Cloud environment of the UPU, which is ISO 27001 certified, brings a high level of security. This is vital given the sensitive information stored in the IPS software, said David Avsec, the PTC Account Relationships Coordinator.

For further information, you may access the following link.
