

### Empowering Digital Logistics

A Carrier agnostic SaaS platform - FarEye, is digitalizing logistics by integrating and optimizing business processes and adding a predictability layer to make them more receptive. The solution uses a blend of mobility and geo-intelligence to provide real-time multi-enterprise visibility of logistics function.

FarEye has designed the world's first Logistics BPM Engine for the modern-age logistics, enabling companies to become agile and reduce their go-to-market time. We are helping organizations to champion operational efficiency and provide value added services to its customers like : time-slot deliveries, parcel shops & locker deliveries, elastic logistics, personalized deliveries and many others – increasing their revenue streams and giving businesses a competitive edge, to win every time.

FarEye executes half a billion shipments annually and has helped in increasing the first-time attempts by 25%, reducing the fuel expenses by 28% and increasing the customer visits by 66%. FarEye has been empowering the logistics wings of over 75 large organisations across 15 countries globally that include:

Meet experts from FarEye at Booth #3 to understand how their intuitive platform can help postal companies to reduce delivery costs, utilise resources efficiently and meet customer expectations.
